

TRANSITION 100+ CLOUD ACCOUNTS FROM CHECK POINT CLOUDGUARD TO WIZ & TAMNOON IN UNDER 2 WEEKS

A media enterprise used Tamnoon's AI-powered, human-verified managed cloud security service to transition from Check Point CloudGuard to Wiz in under 2 weeks without any disruption. By implementing custom security rules and tailored configurations, the migration ensured seamless policy enforcement, allowing engineers to reduce their critical issues to 0 in less than 60 days while streamlining overall alert focus.

CNAPP alerts

80%

faster mean time to
remediate (MTTR)

The Challenge

A media conglomerate made a business decision to transition from their CNAPP, Check Point CloudGuard, to Wiz. Their cloud security, engineering, and DevOps teams, constrained by limited resources, struggled to manage the migration on their own while still securing the business.

Before migrating to Wiz, the media conglomerate struggled with improper configurations in their existing CNAPP, missing security controls, and an incomplete deployment. These gaps left teams without full visibility or enforcement, making it difficult to detect and remediate vulnerabilities. Limited resources further slowed their ability to prioritize alerts and address recurring misconfigurations, leading to operational risk and unnecessary strain on development teams.

“

“Tamnoon provided invaluable prioritization and remediation guidance of our vulnerabilities in our public cloud. We would have paid upwards of 200k per person to hire, train, and integrate an analyst to restructure our entire vulnerability management and remediation program. Instead, we used Tamnoon and paid a fraction of that cost on a specialized managed service to write the playbooks and integrate with our devs and engineers - and work towards proactive security.”

– Senior Vice President

Global Infrastructure & Cybersecurity

The Solution

In just two weeks, Tamnoon partnered with the organization's security engineers to seamlessly integrate Wiz, enhancing their security posture with both Tamnoon's human expertise and contextual remediation guidance. Without needing to ramp to new tooling, Tamnoon's team was already experienced with Wiz, allowing them to start addressing security gaps immediately.

Tamnoon empowered the media company's development teams to address the root causes of Wiz issues efficiently and with minimal disruption. By providing safe, actionable remediation guidance in the form of automation and scripts, Tamnoon enabled the in-house team to mitigate cloud vulnerabilities with confidence and precision.

The Results

Together, Tamnoon and Wiz transformed the organization's cloud security posture, remediating issues and empowering engineers and developers to maintain strong security moving forward.

- **Seamless Migration:** Tamnoon, with in-house security teams, transitioned over 100 cloud subscriptions and accounts from Check Point CloudGuard to Wiz for 20+ development teams.
- **Custom Configuration:** Tailored Wiz security policies, alerting rules, and automation workflows to fit the organization's cloud environment and prioritize critical infrastructure.
- **Alert Reduction:** Tamnoon helped configure Wiz while also ingesting, triaging, and prioritizing every CNAPP Alert in Tamnoon – reducing and closing critical issues by 97%.
- **Team Efficiency:** Tamnoon helped reduce the Mean Time to Remediation (MTTR) for critical and high issues while decreasing volume per asset. By collaborating with cloud security, engineering, and DevOps teams we tackled complex challenges, starting with simple misconfigurations like publicly writable ACLs on S3 buckets. Teams working with Tamnoon were 80% more efficient at resolving critical and high alerts than those without Tamnoon.

Tamnoon x Wiz Partnership

Combining Wiz's advanced CNAPP capabilities with Tamnoon's expert-curated prioritization and remediation playbooks, organizations can effectively tackle cloud misconfigurations and enhance their security posture. With Tamnoon's deep impact analysis and customized remediation plans, joint customers can accelerate their cloud security maturity without disrupting production.
